

HOCKEY

ADVANCED XT POLYMER TECHNOLOGY FOR A STRONG, LONG LASTING HOCKEY SURFACE SOLUTION

GREENFIELDS PE

Key benefits:

- ✔ Cost effective surface solution
- ✔ Long lasting surface due to the XT polymer technology
- ✔ High usage possible due to the tape yarn

GreenFields PE for hockey is based on the most advanced XT polymer technology providing enhanced durability and an extremely long lifetime. Constructed with a pile height of either 20 or 24 mm of tape yarns and then heavily sand filled for maximum results.

This product is a perfect option in colder climates where a water based pitch would not be possible and is a more economic option for community clubs where the pitch has to withstand intensive usage and play.

An additional benefit of GreenFields PE is that its short pile structure and resilience enables other sports to be played on it resulting in a multifunctional, cost effective surface solution for amateur clubs.

“

The children will benefit hugely from the facility and we are extremely proud of this investment.
